MANUAL PROJECT

Step 1: Choose The Application

APPLICATION

Paytm is a digital payment platform which is used to send money, recharge mobile, pay bills, and perform online transactions. Instead of visiting banks or shops, we can do payments directly using Paytm.

Step 2: Perform Exploratory Testing And Prepare Report Understand The Application

- We can send/receive money
- We can scan QR codes and pay
- We can recharge mobile and DTH
- We can pay electricity, water, and gas bills
- We can add money to wallet
- We can book tickets
- We can view transaction history

List Down The Features

- Users can create their own account
- Users can securely login using mobile number and OTP
- Users can link bank accounts
- Users can add money to wallet
- Users can send money using UPI
- Users can receive money
- Users can scan QR codes to pay
- Users can recharge mobile and DTH
- Users can pay utility bill

• Users can book tickets

• Users can view transaction history

• Users can update profile information

• Users can logout from their account

List The Types Of Components

- Text Field
- Text Area
- Buttons
- Links
- Dropdown Menu
- Checkbox
- Radio Button
- Icons
- Lists
- Images
- Text
- Scroll Bar
- Search Bar
- QR Scanner

List The Dataflows

1.Click the sign up button → enter the mobile number → enter OTP → it will store it in the database → account created

2.Click the login button → enter mobile number → enter OTP → it will verify in the database → homepage will be displayed

3.Click add bank account → select bank → verify using OTP → bank account linked →

Click send money → enter mobile number/UPI ID → enter amount → confirm payment → transaction successful

4.Click scan QR → scan code → enter amount → pay → payment successful

5.Click recharge → enter mobile number → select plan → pay → recharge successful

6.Click pay bill → select biller → enter details → pay → bill payment successful

7.Click add money → select payment method → confirm → wallet balance updated

8.Click transaction history → select transaction → details displayed

9.Click profile → click logout button → it will take you to the login page

List The End To End

1.Login → send money → payment successful → logout

2.Login → scan QR → pay → transaction successful → logout

3.Login → recharge mobile → payment successful → logout

4.Login → pay electricity bill → payment successful → logout

5.Login → add money to wallet → wallet updated → logout

6.Login → link bank account → verification successful → logout

7.Login → book ticket → payment successful → logout

8.Login → view transaction history → logout

9.Login → update profile → save changes → logout

10.Login → change UPI PIN → success → logout

Step 3: What Report You Prepared In Second Stage Consider That Report As Requirement And Write Test Scenarios

Functional testing scenarios

Text Field

- Verify by entering valid mobile number
- Verify by entering invalid mobile number
- Verify by entering valid UPI ID
- Verify by entering invalid UPI ID
- Verify by entering amount

Text Area

- Verify by entering message while sending money
- Verify by entering text in feedback section
- Verify by entering text in complaint section
- Verify by entering address details
- Verify by entering nothing

Buttons

- Verify by clicking pay button
- Verify by clicking send money button
- Verify by clicking recharge button
- Verify by clicking add money button
- Verify by clicking logout button

Links

- Verify by clicking support link
- Verify by clicking terms and condition link
- Verify by clicking privacy policy link
- Verify by clicking offers link
- Verify by clicking bank information link

Dropdown Menu

- Verify by choosing bank name
- Verify by choosing recharge plan
- Verify by choosing biller
- Verify by choosing payment method
- Verify by choosing language

Checkbox

- Verify by clicking terms and condition checkbox
- Verify by selecting multiple bills
- Verify by selecting saved beneficiaries
- Verify by selecting notification preferences
- Verify by selecting auto-pay option

Radio Button

- Verify by selecting payment methods
- Verify by selecting bank account
- Verify by selecting recharge type
- Verify by selecting ticket class
- Verify by selecting language

Icons

- Verify by clicking scan QR icon
- Verify by clicking wallet icon
- Verify by clicking history icon
- Verify by clicking notification icon
- Verify by clicking profile icon

Lists

- Verify by checking transaction list
- Verify by checking recharge plans list
- Verify by checking billers list

- Verify by checking offers list
- Verify by checking saved contacts list

Images

- Verify by checking the logo image
- Verify by checking QR code image
- Verify by checking bank logos
- Verify by checking offer banner images
- Verify by checking profile picture

Text

- Verify by checking transaction messages
- Verify by checking success messages
- Verify by checking error messages
- Verify by checking balance text
- Verify by checking instructions

Scroll Bar

- Verify by scrolling home page
- Verify by scrolling transaction history
- Verify by scrolling offers page
- Verify by scrolling recharge plans
- Verify by scrolling settings page

Search Bar

- Verify by searching contacts
- Verify by searching billers
- Verify by searching transactions
- Verify by searching offers
- Verify by searching services

INTEGRATION TESTING SCENARIO

Sign Up Flow

Click Sign Up → Enter Mobile Number → Enter OTP → Account Created

- Verify valid mobile number and OTP
- Verify invalid mobile number handling
- Verify wrong OTP handling
- Verify resend OTP functionality
- Verify success message

Login Flow

Click Login → Enter Mobile Number → OTP → Homepage Displayed

- Verify login with valid credentials
- Verify invalid OTP handling
- Verify login without input
- Verify error message display
- Verify redirection to homepage

Bank Linking Flow

Add Bank Account → Verify → Account Linked

- Verify bank selection
- Verify OTP verification
- Verify invalid OTP handling
- Verify multiple bank linking
- Verify bank listed successfully

Send Money Flow

Send Money → Enter Details → Confirm → Success

- Verify sending to valid user
- Verify invalid UPI ID handling
- Verify insufficient balance message

- Verify transaction failure handling
- Verify success message

Scan and Pay Flow

Scan QR → Enter Amount → Pay → Success

- Verify QR scanning
- Verify amount entry
- Verify payment processing
- Verify transaction record
- Verify success notification

Mobile Recharge Flow

Recharge → Enter Number → Select Plan → Pay

- Verify valid recharge
- Verify invalid number handling
- Verify plan selection
- Verify payment processing
- Verify confirmation message

Bill Payment Flow

Select Biller → Enter Details → Pay → Success

- Verify biller selection
- Verify details validation
- Verify payment success
- Verify receipt generation
- Verify transaction history update

Add Money to Wallet Flow

Add Money → Select Method → Confirm

- Verify adding via UPI/card
- Verify payment failure handling
- Verify wallet balance update
- Verify transaction recorded
- Verify limit validation

Ticket Booking Flow

Select Ticket → Choose Options → Pay → Booking Confirmed

- Verify selection process
- Verify seat/class selection
- Verify payment success
- Verify booking confirmation
- Verify ticket availability update

Logout Flow

Click Profile → Logout → Login Page Displayed

- Verify logout button functionality
- Verify session termination
- Verify redirect to login page
- Verify user cannot access app without login
- Verify login button visible

SYSTEM TESTING SCENARIO

Send Money End-to-End Flow

Login → Send Money → Payment Successful → Logout

- Verify login using valid credentials
- Verify sending money to valid user
- Verify balance deducted correctly
- Verify success message displayed
- Verify logout

Scan and Pay End-to-End Flow

Login → Scan QR → Pay → Transaction Successful → Logout

- Verify QR scanning
- Verify payment processing
- Verify transaction recorded
- Verify confirmation message
- Verify logout

Mobile Recharge End-to-End Flow

Login → Recharge Mobile → Payment Successful → Logout

- Verify entering mobile number
- Verify selecting plan
- Verify payment success
- Verify recharge confirmation
- Verify logout

Bill Payment End-to-End Flow

Login → Pay Bill → Payment Successful → Logout

- Verify biller selection
- Verify entering details
- Verify payment success
- Verify receipt generation
- Verify logout

Wallet Top-Up End-to-End Flow

Login → Add Money → Wallet Updated → Logout

- Verify adding money
- Verify payment success
- Verify wallet balance updated
- Verify transaction history updated
- Verify logout

Bank Linking End-to-End Flow

Login → Link Bank Account → Verification Successful → Logout

- Verify bank linking process
- Verify OTP verification
- Verify success message
- Verify bank listed in account
- Verify logout

Ticket Booking End-to-End Flow

Login → Book Ticket → Payment Successful → Logout

- Verify ticket selection
- Verify seat/class selection
- Verify payment success
- Verify booking confirmation
- Verify logout

Transaction History End-to-End Flow

Login → View Transaction History → Logout

- Verify history displayed
- Verify transaction details
- Verify filtering options
- Verify scrolling functionality
- Verify logout

Profile Update End-to-End Flow

Login → Update Profile → Save → Logout

- Verify profile editing
- Verify saving changes
- Verify updated data displayed
- Verify persistence after login again
- Verify logout

UPI PIN Change End-to-End Flow

Login → Change UPI PIN → Success → Logout

- Verify entering old PIN
- Verify entering new PIN
- Verify confirmation process
- Verify success message
- Verify logout

SMOKE TEST SCENARIOS

Functional Testing – Smoke Scenarios

- Verify user login with valid mobile number and OTP
- Verify successful logout from application
- Verify mobile recharge functionality
- Verify QR code scanning and payment
- Verify sending money using UPI ID

Integration Testing – Smoke Scenarios

- Verify login module integration with OTP service
- Verify bank account linking with banking API
- Verify recharge module integration with payment gateway
- Verify transaction history updates after payment
- Verify wallet balance updates after bill payment

System Testing – Smoke Scenarios

- Verify complete end-to-end login and logout flow
- Verify complete end-to-end money transfer process
- Verify complete mobile recharge workflow
- Verify complete QR payment workflow
- Verify complete wallet add-money process

CONCLUSION

This project helped in understanding the Software Testing Life Cycle process and manual testing concepts using a real-time digital payment application. Different testing types such as Functional Testing, Integration Testing, System Testing, and Smoke Testing were performed successfully.
